 SAVE an extra

**\$10!!!**

**Fall Protection**

This course covers Cal-OSHA regulations review; fall protection for the construction industry summary and fall protection for residential construction review, construction fall protection trigger heights, physics of a fall, conventional methods of fall protection, alternative methods of fall protection, fall protection plans, fall hazard assessment, communication and training, and equipment demonstration.

**Upon completion, students will be issued a Certificate of Completion.**

*Fall Protection is the 2nd most frequently cited Cal OSHA standard in the construction industry carrying penalties in excess of \$6 MILLION annually!*

*Cal OSHA Requires that "approved" personal fall protection MUST be worn by those employees whose work exposes them to falling in excess of 7.5 feet from the perimeter of a structure, unprotected sides and edges, through shaftways and openings, sloped roof surfaces steeper than 7:12, or other sloped surfaces steeper than 40 degrees not otherwise adequately protected.*

*If your employees work in these conditions they MUST receive training in proper fall protection procedures and systems and that the implementation of fall protection plans and equipment inspections be completed by a "competent person."*

## "Competent Person" Certification
